EM-J5-P3600 - Grav Lift

The EM-J5-P3600 grav lift was developed for use by the Star Army of Yamatai in the EM-J5 Flying Assistant Robot Series (FARS), it became available in YE 36.

About the EM-J5-P3600

The J5-P3600 is a micro graviton drive which provides all of the propulsive force the EM-J5 requires. The drive has to modes of operation. Normal which provides a lower acceleration rate, and a maximum speed of 120 kph. It also has a high performance mode. This mode sacrifices energy efficiency for a higher acceleration rate and a maximum velocity of 240 kph.

While technically capable of achieving higher velocities in either mode, the J5-P3600 has an integrated governor which limits the maximum speed.

Details

Manufacturer: Emrys Industries
Nomenclature: EM-J5-P3600

Type: GravityClass: Propulsion

• Designer: Tamahagane Corporation R&D

OOC Notes

Nashoba wrote this article.

Products & Items Database	
Product Categories	subsystems
Product Name	Grav Lift
Nomenclature	EM-J5-P3600
Manufacturer	Emrys Industries
Year Released	YE 36
