

Emrys Quik Paks Processor

Emrys Industries

A Tamahagane Company

The Emrys Quik Paks Processor is designed to heat [Emrys Quik Paks](#) properly for consumption. They became available in [YE 34](#).

The unit is about the size of a large microwave. But instead of a door it has a slot that the Quik Pak is inserted into. The unit is mostly automatic. Insert your meal, wait a few minutes, take it and eat.

Details

Manufacturer: [Emrys Industries](#) Nomenclature: Ge-E1-M3400 Type: Precooked Class: Food Designer: [Tamahagane Corporation R&D](#) **Price:** 150 KS

Using the Quik Paks Processor

When it passes through the  [matrix barcode](#) on the top of the package is scanned. If the package is inserted the wrong way it will be ejected.

The meal is then deposited in the heating chamber. The unit can heat each of the meal sections independently. The unit uses the information on the barcode to heat each component the right amount. Items that require stirring a sonic probe lowered to the section to vibrate the contents, the probe is capable of moving to mix the contents even more.

Once the meal has been properly prepared, the probes are removed and the meal is returned to the individual.

Note: Damaged Quik Paks should not be used as they could jam the system. There is a panel that opens to allow clearing the unit. Only trained technicians should service the unit.
