

# Geshrinari - Atmospheric Containment Shield

The [Geshrinari Shipyards](#) Atmospheric Containment Shield (ACS) is a recent addition that can be added to existing and new vessels. It became available in [YE 35](#).

It is the latest safety system that the company has implemented. It allows areas protected by one to maintain atmosphere in a section even if the hull has been breached.

The ACS can two modes of operation. Permeable and non-permeable.

## Permeable

Permeable physical objects can pass through the field with little effort. Typically a slight hissing sound will be heard as the object moves through.

## Non-permeable

At this level solid objects will not pass through the barrier. This is useful to prevent debris or animals from passing through the shield.
