

Tio Utovu (Demo Node)

Tio Utovu is an explosive mine for use against vehicles and personnel. The current version came into use in 711 CY

About the Tio Utovu

A Tio Utovu is primary intended as an anti-personnel weapon. But is effective against vehicles with little to no armor. It consists of a layer of [Felsa](#). In the Felsa are 1,000 bullet shaped projectiles made of [Mâqitua \(Light Metal\)](#). The back of the Tio Utovu is made of [Mâqitua \(Light Metal\)](#) designed to direct the blast forward.

The explosion propels the projectiles at a high speed making them effective out to 300 meters. It should be noted that deploying Tio Utovu so that two or more will detonate towards a specific point will result in devastating damage when the blasts converge.

Blast Range	Blast effect	Blast Area
0 - 50 meters	2 ADR	50m wide by 2m high
51 - 100 meters	1 ADR	100m wide by 4m high
101 - 200 meters	4 PDR	200m wide by 8m high
201 - 300 meters	2 PDR	250m wide by 9m high

1 Case contains 20 Tio Utovu
