

Poku Movi Vamâqi (Clan Void Berth)

The Poku Movi Vamâqi *Clan Void Berth* is a facility that orbits the [Sotâka Ruomâqi \(World Station\)](#), which itself floats near the star [Ida Siamaka](#) in the [Degonjo Saeruo \(Hidden Sun System\)](#).

The berth is the [Poku Saeruo Degonjo](#)'s shipyard and research facility. Construction on the berth began in 0 CY ([YE -719](#)) upon arrival at the new home of the [Poku'vonai](#) and continued for twenty-five years. The berth came online in 25 CY ([YE -694](#)) although it has undergone a number of refits of the years.

The Poku Movi Vamâqi is home to the [Otâmovi Wiy Jael \(Silver Moon Sect\)](#); it is here that the majority of that Sect performs its work.

The top sections of the facility are devoted to reverse-engineering technology brought in by Harvesters. The next section of the Berth is the processing section; this is where gather materials are broken down and recycled. There are forges for melting the material and making metal sheets used for fabrication. The bottom half of the Berth is the shipyard; one third of it is for construction, the rest is used for the repair/refit of Clan vessels.
