

Âmanus Rotyka (Annihilation Cannon)

The Âmanus Rotyka *Annihilation Cannon* is the second most powerful shipboard weapon that a [Poku Saeruo Degonjo](#) vessel can mount. It has been in use by the clan since before the [Norka \(The Exodus\)](#).

The cannon is actually a twin barrel Positron/Electron pulse cannon. The cannon builds up a charge of Positrons and Electrons. When fired the cannon fires two focused pulse streams of particles at near light speed. The streams lose effectiveness beyond 2 light-seconds as they interact with particles along the way. The beams are 1 meter apart. When the beams strike an object or a shield the particles scatter, and the two sets of particles react in an [Electron-positron annihilation](#) explosion.
