

HS-SS1-E739/03 Anoka Degon'te (Stealth Shield)

The [Poku Saeruo Degonjo](#) use Anoka Degon'te *Shield of Hiding* to conceal their ships from enemy vessels, or during hunts. The Anoka Degon'te is a technology the clan had prior to the [Norka \(The Exodus\)](#) but this is the latest version that has been in use in the fleet since [YE 20](#).

General

Class: Stealth Nomenclature: HS-SS1 E736/03 Type: Shield Designers: [Otâmovi Wiy Jael \(Silver Moon Sect\)](#) Manufacturer: [Otâmovi Wiy Jael \(Silver Moon Sect\)](#) on [Poku Movi Vamâqi \(Clan Void Berth\)](#)

Description

The Anoka Degon'te harnesses the massive power of the [Tinvyma Movidoanor \(Tunnel Drive\) Heim Force Generator](#)s to create a subspace shield around the ship to handle FTL sensors. It also erects a tuned shield just beyond the subspace one that deflects RF energy such as radars and the like.

During Degon'te (Stealth) mode, the ship ceases any and all transmissions. The ship operates by 🧠[dead-reckoning](#) until it gets to within firing range of the target.

The Anoka Degon'te offers no protection from destructive forces.

Limitations

- When the Anoka Degon'te the ship can not engage its [Udano Veltin \(Gravity Spike\)](#) or [Udano Rotyka Sakopa \(Gravitic Shock Cannon\)](#). This means that after dropping the stealth, the ship can not fire its [Udano Rotyka Sakopa](#) for thirty seconds.
- The ship can not use any other form of shielding because they interfere with the stealth shield.
