

# I'ee 'Peeler' Strafe-bomber

A recent development in the I'ee fleet and one of the most maneuverable craft yet created by the I'ee, the 'Peeler' is a form of aerospace bomber used by the I'ee, primarily for use against large enemy warships. It's namesake is the particle lash weapon system mounted on the underside of the craft: A short-range, but powerful energy weapon whose emissions are dragged across the surface of a target as the bomber swoops overhead.

## About the Ship

Built to fill a gap in the I'ee fleet, the Peeler is their first attempt at creating a dedicated bomber craft, as well as the use of a new energy weapon system.

### Key Features

- Maneuverability
- Anti-armour capabilities

### Mission Specialisation

- Capital ship killing

## Appearance

While wider than the earlier 'Six-shooter' Gunship created by the I'ee, the Peeler presents a much smaller target in its other dimensions. A spherical, polarised screen, containing the cockpit, is nestled between two short, curving wings which form a semi-circle shape. Directly behind the cockpit is a defensive turret used to ward off attacking strike-craft or missiles. On either side of the craft's short, rectangular tail are the engines, and along the ventral length of the ship is the primary weapon system.

## History and Background

Rising political tensions with the VDTF, along with Ith'ee's own dismay and anger at the enthrallment of her daughter, Thoot, spurred the elder I'ee families into a period of naval overhaul and military development. Seeking to expand upon the I'ee's [limited](#) strike craft capabilities, Ith'ee devised a small craft that would strike against larger enemy warships while avoiding tangling with craft of a similar size. Besides field testing, the craft has yet to see any real action.

# Statistics and Performance

## General

- Class: N/A
- Type: Bomber
- Designers: Ith'ee
- Manufacturer: Ith'ee
- Fielded by: Ith'ee, Thi-Thi and Ith'it

## Passengers

Crew: 1 pilot and 2 gunners.

## Dimensions

- Length: 25 meters (145.9 feet)
- Width: 20 meters (82 feet)
- Height: 5 meters (65.6 feet)

## Propulsion and Range

- Sublight Engines: 0.095 c
- Range: Five Earth days.
- Lifespan: Three Earth years.
- Refit Cycle: Six Earth months.

## Ship Systems

### Armored Hull and Hull Integrated Systems

- [Tyranium Alloy](#)

### Propulsion

- [I'ee Standard Particle Drive](#)

## Weapons Systems

- [Ventral Lash](#): 6, Tier 4, Light Anti-Armor
- [Double-barrelled Scatter Guns](#): 1, Tier 4, Light Anti-Armor

## Damage Capacity

- Hull: 5 SP
