

# Meganut

A meganut (or “turkey nut”) is a large tree nut that is native to [Planet Nepleslia](#). It is an edible [food](#) that is considered a delicacy.

## Description

Meganuts grow to a size of around 32 centimeters (over a foot) long and have dome-shaped sides that strongly resemble that of walnuts. They grow on massive trees that, unfortunately, are very rare in the ultra-developed surface of planet Nepleslia. The interior of the nut contains two large meaty halves each of which is referred to as a “turkey.”

Meganut shells are so strong that they can deflect small to medium caliber bullets and shell halves were sometimes used as helmets during wars between the [Greens](#) and [Nepleslian Reds](#).

Wes has commented that the meganut is “what a walnut looks like to a 4-inch action figure.”
