Jiyuu VII

Jiyuu VII is the seventh planet in the Jiyuu System, it is part of the Yamatai Star Empire.

About Jiyuu VII

Jiyuu VII is a Jupiter-sized gas giant. It was discovered and studied in YE 29 by the YSS Akuro II of the Fifth Expeditionary Fleet. It is a relatively typical gas giant, except it has a retrograde orbit. It has three tiny rings, and a massive number of captured asteroids in orbit, which differ in altitude, angle, and level of degradation.

During the NMX invasion in YE 33, several United Outer Colonies Peacekeeping Forces ships hid in the asteroid fields caught in the planet's gravity.

In YE 42, the Yugumo Corporation set up several automated atmospheric mining (gas mining) facilities in orbit to collect gases like hydrogen, helium, and methane from the planet's atmosphere.

Statistics for Jiyuu VII	
Type	Gas Giant
Facilities and Bases	No
Colony	No
Population	None
Moons	8 Moons

Places to Explore or Salvage

This planet is a gas giant so there are no surface regions to explore or develop.

Orbital Assets

Jiyuu VII has several orbital installations:

Defense Systems

The Star Army of Yamatai established a "Guriddo" Defense System as part of the Jiyuu System Defense Plan laid out by Ketsurui-Motoyoshi Katsuko in YE 42. The system includes:

- 20 Ke-H5-W3200 "Kyouheki" Defense Platforms each typically controls two Ke-H5-M3200 "Nesuto" Docking Platforms, but can handle more.

    - 10 Ke-H5-M3200 "Nesuto" Docking Platforms each with 18 Ke-H5-W3201 "Suzumebachi" Attack Drones
        - 180 Ke-H5-W3201 "Suzumebachi" Attack Drones

Satellite Network

The planet also has an orbiting network of Emrys Satellites for communications that were deployed by the Star Army of Yamatai in YE 36.
