Ke-M2-P2904 Barrier Shield Module

The Ketsurui Fleet Yards Ke-M2-P2904 Barrier Shield Module was first developed at the Secret Scorpio Research Base as an add-on to provide the Mindy's CFS system the same shielding function as shuttles and starships have. The unit functions by using the electrogravitic and electrostatic fields formed by the Combined Field System to protect from both solid and beam weaponry by curving the space around the armor, allowing the attacks to be deflected without harm to the Mindy. First tested by the YSS Sakura in the PNUgen raid in YE 29, the barrier shield proved itself as being extremely effective, allowing two Mindy armors to survive a skirmish with a squad of M1 Lamias.

- Damage Capacity: 10 SP, Threshold 4 (Mecha)
- Barrier Shielding: Can blunt and deflect attacks. The barrier can absorb and cope with a very heavy amount of punishment. It takes five seconds for the barrier shield function to active or deactivate.
- Power Usage: Using the CFS system to provide the Mindy with such powerful, all around protection drains a lot of power, slowing the recharge of the forearm projector by half while it is active.

Products & Items Database	
Product Name	Barrier Shield Module
Nomenclature	Ke-M2-P2904
Manufacturer	Ketsurui Fleet Yards
Year Released	YE 29
