Ke-V8-E3200 Wavefront Module

The Ke-V8-E3200 was developed for use on the *Ke-V8 "Teisatsu" Fighter* and became available in YE 32.

About

The Ke-V8-E3200 is a system developed to allow a *Ke-V8 "Teisatsu" Fighter* or *Ke-V8 "Kawarime" Fighter* to inhibit/overwhelm enemy detection systems. It creates a massive sensor white noise affect. For maximum effectiveness multiple equipped craft advance creating a "wave" of noise. The heart of the unit comes from the Type 31 Electronic Warfare Suite.

History

The Ke-V8-E3200 was developed during the early design state of the *Ke-V8 "Teisatsu" Fighter*. Originally intended to be integrated into the fighter, due to space constraints it was designed to operate externally.

Specifications

General

Class: Ke-V8-E3200 Type: Defensive System Designers: Ketsurui Fleet Yards Manufacturer: Ketsurui Fleet Yards Production: Mass Production

Requires Weapon Pod Mounting.

Dimensions

Length: 2.00 meters (6.56 feet) Diameter: .5 meters (1.64 feet)

Capabilities

The Ke-V8-E3200 can:

- Generate "noise" that interferes with enemy subspace, hyperspace, and radio transmissions.
- Generate directed electromagnetic or electrogravitic (scalar) pulses to disrupt sensors.

Range:

- Operating out to a distance of .5 AU

The Ke-V8-E3200 has a series of sensors that detect the frequencies being utilized by the enemy and displays their bandwidth. This allows the operator to adjust the output of the Ke-V8-E3200 for optimum effectiveness.
