

Ke-B5-W3903 Type 39 Heavy Anti-Starship Turret

The Ke-B5-W3903 Type 39 Heavy Anti-Starship Turret is designed exclusively for shipborne usage with the [Izanagi-class Dreadnought](#). There are fifty-two of these turrets on the hull of the Izanagi-class. The Ke-B5-W3903 weapon system is the secondary anti-capital and anti-starship weapon of the Izanagi-class. The turret draws power primarily from an [aether generator](#) that functions independently from that of the ship itself. The generator also includes a capacitor and a cooling system. The aether generator and its support systems are located within the base of the turret. In the event that the main reactor of the host Izanagi-class is disabled, the turrets can fire independently. If needed, the turrets can also be connected to the primary [aether reactor](#) of the host ship.

The turret fires condensed potentials from the aether in a massive and coherent aetheric projectile. These projectiles deal damage through severe burning and anti-matter effects.

The turret structure itself has a cylindrical base (which is stored within the hull of the ship) and a rotating turret dome. When not in use, the double-barreled turret is retracted into the cylindrical base (inside of the ship itself) and covered with a [zesuaium](#) plate.

- **Purpose:** Tier 12, Heavy Anti-Starship
- **Range (Space):** 800,000 kilometers (497,096.54 miles)
- **Rate of Fire:** 1000 RPM
- **Ammunition** 10-20 minutes of sustained fire, Theoretically unlimited as long as the weapon retains function.
