

# Ke-V9-W3301 Turbo Aether Turret

The Ke-V9-W3301 Turbo Aether Turrets was developed for use on the [Ke-V9 "Nodachi" Assault Fighter](#) and became available in [YE 33](#).

## About

The Ke-V9-W3301 utilizes raw [Aether](#) from an adjacent power plant, which is supercharged and accelerated in a subspace acceleration tunnel array until it reaches a plasma state. The plasma diverted to each barrel, field-jacketed, subjected to gravitational lensing and then expelled through the weapons muzzles at just below the speed of light. It has an increased rate of fire and a wider firing arc when compared to the [Ke-V9-W3300 Turbo Aether Cannon](#), but possesses a fourth the range and an overall lower damage output..

## Specifications

Specifications for the Ke-V6-2A:

### General Information

- Class: Ke-V9-W3301
- Type: Weapon System
- Designers: [Ketsurui Fleet Yards](#). [Murasaki Emiko](#)
- Manufacturer: [Ketsurui Fleet Yards](#)
- Production: Mass Production

## Performance Statistics

- Purpose: Anti-Starship / Anti-Warhead
- Damage: Tier 6, Heavy Anti-Armor
- Range: Approximately 200,000 kilometers (Roughly equal to 125,000 miles)
- Rate of Fire: 4 bursts every 1 second
- Firing Arc: Weapon can be rotated 360 degrees around, whilst the barrels can turn 80 degrees up or 15 degrees down
- Payload: Effectively Unlimited.
