

# Higaflan

Higaflan is a star system on the western edge of the Mishhuvurthyar Cluster. It is currently unclaimed by any nation officially, but it has become a home for the [Rixxikor Collective](#). The habitable planet is a “farm” world that is primarily covered in vast crop fields divided by hedge rows.

## History

During the [First Mishhuvurthyar War](#), the Higaflan system was controlled by the [Sfrarabla Mishhuvurthyar Xhrafuklurp \(SMX\)](#). It was where the construction facility for the [Shlarvasseroth-class Flagship](#) was located. A ship built here was used by [Melisson](#) to destroy [Taiie](#).

After the war, the system briefly held by [Democratic Imperium of Nepleslia](#) following the [International Relations Conference of YE 30](#).

During the [Second Mishhuvurthyar War](#), the system was controlled by the [NMX](#) and was primarily used for the production of corn. The NMX built farms, a meat factory, a war factory, a prison, an [NMX Processing Facility](#), a Logistics Engine, a Breeding Facility on Higaflan’s moon, and six [NMX light shipyards](#).

In [YE 35](#) the [YSS Aeon](#) leading a combined attack group of 1XF and 2XF forces, launched a strike in the system destroying the various NMX facilities. They also were able to liberate the prison and evacuate all of the prisoners.

In [YE 35](#) after the assault the [Scientific Studies Service \(SSS\)](#) deployed a [Ke-P6-02a Bisen Lighthouse](#) in orbit above this planet at the request of the [Star Army of Yamatai](#). This allows the surface to be monitored by a small team of scientists. Unfortunately the scientists there were killed in [YE 37](#).

In [YE 37](#), [YSS Eucharis](#) found unknown, hostile starships depositing [Rixxikor](#) on planet Higaflan and that the Rixxikor had set up colonies on the breadbasket world and that their numbers were skyrocketing. Local defense forces got into a firefight with the Eucharis after it was forced to land due to damage. The Rixxikor had also looted the Bisen Lighthouse and killed the SSS scientists there. Eucharis briefly established a ground base, but it was removed when the ship left. It was later revealed that the starships were from the [Interstellar Kingdom Of Kuvexia](#).

By [YE 41](#), the planet had been overpopulated by Rixxikor to the point of unsustainability, revealed to be caused by the intrusion of a hostile second colony. Their numbers were culled back to more stable numbers when the second colony was all but wiped out by combat and civil warfare.

During [YE 41](#), a large rag-tag [Rixxikor](#) operation was detected orbiting the planet Higaflan stealing civilian [Smuggling](#) vessels and using escape pods to act as a sensor net. After finding proof they explicitly intended to use their eggs as biological weapons against Yamataian planets, the [Sakura II](#) attacked an orbital shipyard and ships meant to distribute the eggs. After the [Sakura II](#) manipulated their internet with troll comments, malware, and adult content, the defended of the planet were compromised. Empty escape pods reconfigured to use their fusion power sources as fusion bombs in Higaflan's defense

were hacked and re-purposed to destroy the Rixxikor's means of assault through both direct bombing and EMP. It was discovered that the more peaceful Rixxikor left behind by the Eucharis in YE 37 had been relegated to the fields by a more aggressive colony, allowing them to be spared when the more aggressive colony was wiped out in the combat and the civil warfare afterward.

## Planets

The Higaflan system has three planets.

### Farnsflan

A nearly molten ball of mostly Lead, Farnsflan is very close to the binary star and is too hot to sustain life.

### Higaflan

Higaflan refers to the System and the system’s 2nd planet, an oxygen rich world with lots of basic plant life including large fields of algae that cover more than half of the planet’s oceans and fields of basic ferns. The rudimentary plant life on the landmass of the planet has been cleared away by farm crops that are easily able to kill the fragile plants leaving large areas of land filled with crops (primarily corn), fallow and waiting for crops, or used for farming equipment. Very few of the native ferns remain except for in mountainous or otherwise unpopulated areas.

#### Stats

- Rotation: 28 hours
- Gravity: 1.3g
- Year: 613 days.

### Frynaflan

A large ball of gas with many moons, Frynaflan is the 3rd planet and is the furthest out from the star.
